

TISSUE DIRECT

Inventory Management System

TISSUE DIRECT

TISSUE DIRECT

As the global leader in heart valve technology, Medtronic has been meeting the rigorous inventory demands of operating rooms for more than 30 years. We understand that in the ever-changing operating room environment the demand for perfection is high and so are concerns with inventory space, cost and time management.

The TISSUE DIRECT inventory management system from Medtronic offers a flexible approach to managing heart valve inventory. This easy-to-use system leverages the trusted, time-tested delivery method of the world's orthopedic companies.

RELIABLE, EASY TO USE

Medtronic leverages an extensive distribution network with reliable access to all hospitals in the United States. Using the TISSUE DIRECT system, you receive one or more complete sets of Medtronic Bioprostheses on-time, every time they're needed. When the procedure is complete, the remaining unused valves are returned to Medtronic—it's that easy.

LOWERS INVENTORY COSTS

Because no inventory remains on-site at the hospital, the TISSUE DIRECT system removes the burden and cost of inventory management. Hospitals can realize significant savings through:

- Increased shelf space
- No risk of expiration
- No shelf-stock reconciliation
- Reduced inventory liability

The TISSUE DIRECT system is a partnership between Medtronic and its customers—the more value we can bring to your organization, the more successful we both will be.

TAILORED TO YOUR NEEDS

Contact your Medtronic sales representative to learn more about implementing the TISSUE DIRECT system at your facility.
